

A conversation worth having when it comes to new ceramic tile flooring.

Hi Jane, Dad here! You said you were considering a new ceramic floor for your home, have you thought about the differences between installing ceramic tiles the conventional way and using the Tile Easy system?

Jane: Not really Dad. What's the big difference?

Dad: Well, traditional tile installations need adhesive, but with Tile Easy, there's no adhesive involved. You just click and grout. There is no mess.

Jane: That sounds convenient. Is it quick to install?

Dad: Absolutely! The Tile Easy system can be installed in just one day, whereas traditional methods can take several days, and your house will be a mess.

Jane: That's interesting Dad. Do I need to get a professional for both methods?

Dad: For traditional installations, yes, you need an expert to ensure it's done correctly. But with Tile Easy, almost anyone can do it. Your hubby John and I could do it.

Jane: That's a huge plus, Dad. How soon can you walk on the tiles after they're installed?

Dad: Well if they are laid with traditional methods, you have to wait at least 3 to 4 days. But with Tile Easy, the tiles are ready to walk on immediately.

Jane: What about my existing floor? Does that matter?

Dad: Yes, it does, with traditional methods, the subfloor often needs special preparation, which can be costly. But the Tile Easy system can be installed on almost any level subfloor.

Jane: Great Dad, where can I get Tile Easy ceramic flooring?

Dad: Jump on their website www.tileeasy.com.au
